Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a), which forms the basis for all obviousness rejections, set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 3,526,654 to Hilderbrand et al.

The invention of the present application is directed to a process for isomerizing cis-2-pentenitrile to trans-3-petenitrile in the presence of aluminium oxide as catalyst.

Determination of the scope and content of the prior art (MPEP §2141.01)

Hilderbrand et al., teach a process for isomerization of cis-2-pentenitrile to trans-3-pentenitrile. The reaction is carried out at a temperature from 50⁰C-500⁰C. Alumina is used as a catalyst for the reaction. The catalyst used is either finely divided or porous so as to provide a large surface area. (See U.S. Pat. No. 3,526,654, columns 1, lines 60-67, and column 2, lines 1-7)

Ascertainment of the difference between the prior art and the claims (MPEP §2141.02)

The difference between the prior art of Hilderbrand et al., and the instantly claimed process is that the reaction temperature used in the invention of the present application is 50⁰C-250⁰C as opposed to 50⁰C-500⁰C of the prior art.

Finding of prima facie obviousness--rational and motivation (MPEP §2142-2413)

However, in the absence the showing of unobvious results, it would have been obvious to one skilled in the art at the time of the invention to select a specific range of temperature (50⁰C-250⁰C) to conduct the reaction. The Courts have decided per In re Boesch, 205 USPQ 215 (1980), that the optimization of variables, such as temperature, pH and molar ratios, in a known process is prima facie obvious. Therefore, the claimed process would have been suggested to one skilled in the art.
